StyleCop in Visual Studio

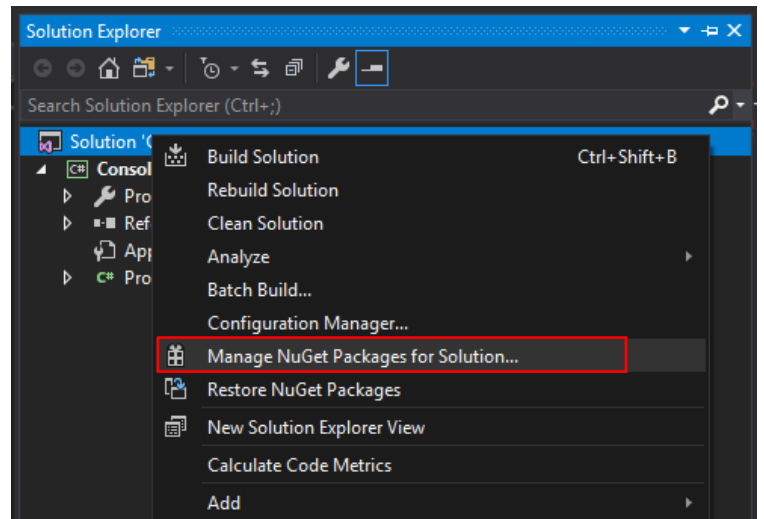

You will need to install StyleCopAnalyzers for every solution/project, it will not be added automatically.

1. In Visual Studio, open the Solution Explorer

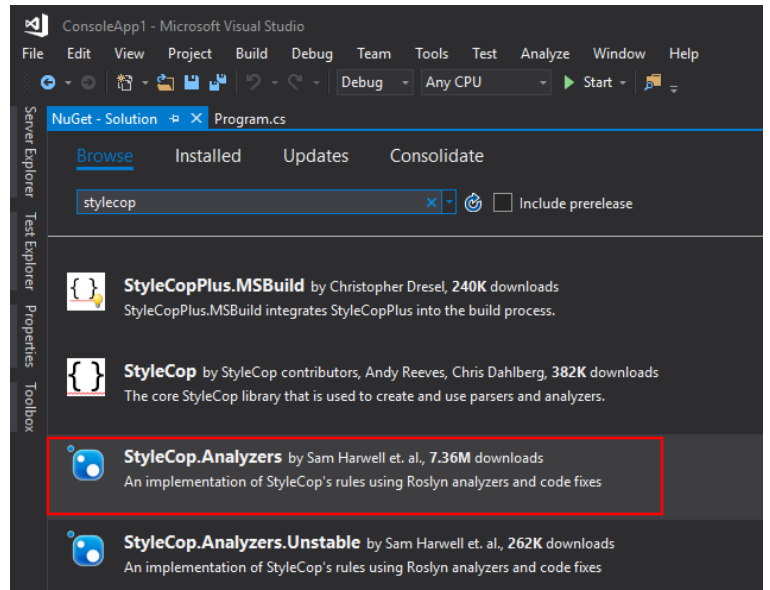

Note: If you don't see the Solution Explorer, it can be found under **View > Solution Explorer**

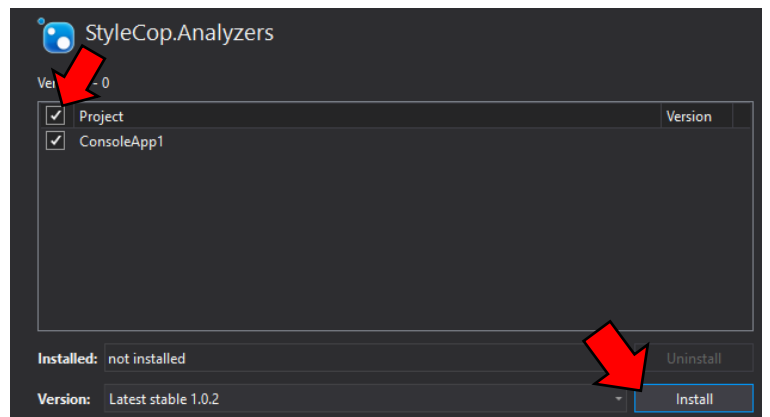

2. In the open solution, right-click on the solution or project you would like to add StyleCop.Analyzers to and click on **Manage NuGet Packages...**

3. A new tab will open. Make sure it is set to **Browse**. Search for “stylecop” and click on **StyleCop.Analyzers**; it should be the 3rd option down

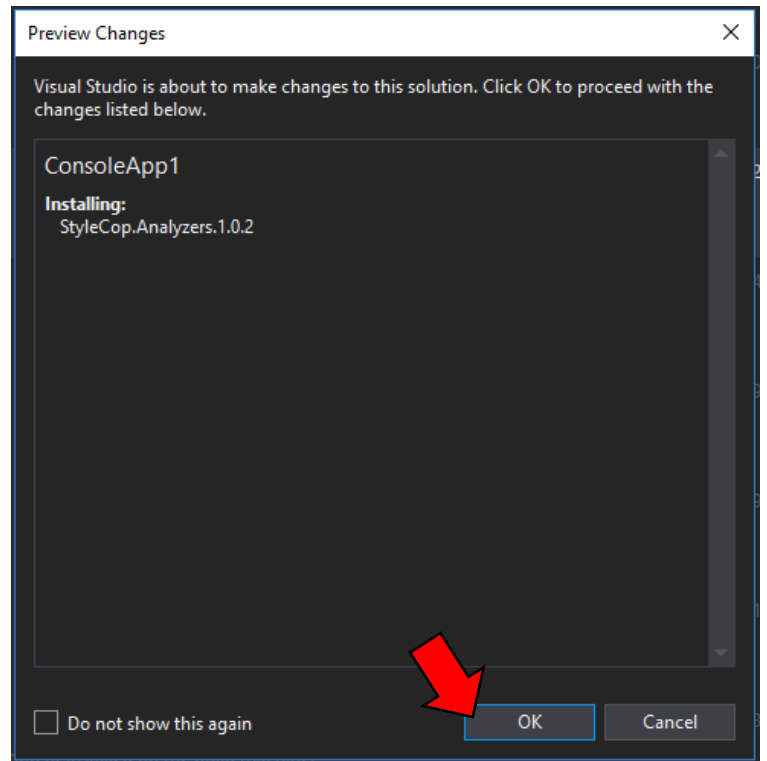

4. If you are adding to a solution, select the project you would like to add StyleCop.Analyzers to and click **Install**

5. A window will pop up asking if it is okay for Visual Studio to make changes to the solution/project. Click **OK**

Note: You may have selected “Do not show this again” previously. If you don’t see this window, don’t worry.

6. Visual Studio should then add StyleCop.Analyzers to the selected project(s)

You probably now have a lot of new warnings (unless you were already following all the .NET naming and style conventions).

StyleCop in Rider

The process to install SyleCop in Rider is very similar: **NuGet Packages -> StyleCop.Analyzers**. Make sure you install them for all projects in your solution.
